

AutoSig Systems, Inc announces the selection of their new product AutoDoc by Denison State Bank

ATLANTA, GA – MARCH 31, 2010 NEWS RELEASE

AutoSig Systems, Inc. (ASI) of Sugar Hill, Georgia , announces the successful selection and implementation of its new product AutoDoc by Denison State Bank.

The AutoDoc system provides community banks value in Document Management with secure browser technology. The system is designed to allow customers the unique ability to view and work with imaged files throughout the entire organization securely.

“The basic decision about which Document Imaging System to implement was driven by Lending because they had the most immediate need,” said Mr. Mike McManigal, Vice President at Denison State Bank. “We looked at a number of Document Imaging Systems for Financial Institutions and decided on a set of features we wanted, to work towards our overall goal of having a paperless bank.”

At Denison State Bank, loan officers, each with different lending expertise, rotate between branches. By using ASI’s AutoDoc system, Lending Officers effectively take their desks and files with them wherever they are working. Users can work on active files or quickly check the status of their pending loans, instead of calling back to the home office. “Lending loves it”, says McManigal. In addition to achieving their document imaging goals for lending, ASI’s AutoDoc supports other areas of the bank like branch operations, and having critical documents stored electronically makes it easy to take backups. This also supports the bank’s goals for Business Continuity Planning in the event of some disaster. Additionally, Denison plans to use the system in more areas of the bank in the future.

McManigal summed up the decision very succinctly: “We liked the system and its features. ASI systems are reliable. That is the sort of partnership we wish we had with every vendor,” says McManigal. “And the system was very affordable”. When you put it like that, it seems like an easy decision.

About Denison State Bank

Denison State Bank headquartered in Holton Kansas, operates full-service branches in Holton, Hoyt, Meriden and Topeka, plus 8 ATM locations in those areas. The bank is recognized as one of the top 50 largest banks in Kansas.

About AutoSig Systems

ASI is an innovator of image document technology that invents and develops solutions for Document and Signature/ID Imaging, Enterprise Content Management (ECM) and Services for the banking and financial community. For over 31 years, banks have selected our software and services to positively impact their operations and help them better verify transactions and store important documents. As an independent provider, our customers remain solidly connected to us, and receive the benefit of continued use of our image technology in spite of other major technologically forced conversions. With a history of creating and inventing efficient algorithms and compressions we have addressed and perfected the details of image technology. Many of our bank customers quote, "it just simply works well." With over 30 years of customer relationships built upon trust and the importance of technology, ASI is an ideal partner to deliver your image automation needs, when the image counts.
